code:

```
while(a>0 && b>0)
```

```
{ if(a>b) a = a - b;
else b = b - a;
```

```
if(a==0) return b;
else return a;
```

```
void  
main  
{  
}
```

Recursion

when a function calls itself until a specific condition is met.

```
void f()
{
    print(1);
    f();
}

int main()
{
    f();
}
```

```
↑ ↑  
↓ ↓
```

infinite recursion
out of memory \rightarrow stack overflow

```
cnt = 0
f() { print (cout);
```

```
cnt++; }  
f();
```

```
(a)
```

```
main () { f(); }
```

0

Recursion Tree: $f(i) \rightarrow f(i-1) \rightarrow f(i-2) \rightarrow f(0)$

Basic Recursion Problems

Q. Print name N times.

```
void f(i, n){  
    if(i > n) return;  
    cout << "Ray";  
    f(i+1, n);
```

Ray
Ray
Ray

```
main(){  
    int n;  
    cin >> n;  
    f(0, n);
```

Q. Print linearly from 1 to N

```
f(i, n){  
    if(i > n) return;  
    cout << i;  
    f(i+1, n);
```

```
main(){  
    input(n);  
    f(1, n);
```

Q. Print integers $N \rightarrow 1$

```
f(i, n) { if (i < 1) return;
            print(i);
            f(i-1, N); }
```

```
main() { input(n); f(1, n); }
```

Q. Print for $1 \rightarrow N$ (not with $i-1, n$) $\xrightarrow{i(0, n)}$ Backtracking

```
f(i, n) { if (i < 1) return;
            f(i+1, n);
            print(i); }
```

```
main() { input(n); f(1, n); }
```

Q. Print for $N \rightarrow 1$ (not with $i-1, n$)

```
f(n, i) { if (n < i) return;
            printf(n, i+1);
            print(i); }
```

```
main() { input(n); f(n, 1); }
```

Q. Summation of $1 \rightarrow N$

$f(i, sum) \{$
 if ($i < 1$) { print(sum);
 return 0;
 }

$f(i-1, sum+i);$

$main() \{$
 input(n);
~~f(n, 0);~~ zero
 }

functional
~~~~~

$f(n) \{$   
 if ( $n == 0$ ) return 0;  
 return  $n + f(n-1)$ ;

$main() \{$   
~~n;~~  
 print(n); i - initial fun  
 }

## Q. Factorial of N

$f(n) \{$   
 if ( $n == 0$ ) return 1;  
 return  $n * f(n-1)$ ;

$main() \{$   
~~n;~~  
 print(f(n)); TC  $\rightarrow O(N)$   
 SC  $\rightarrow O(N)$

Q. Reverse an array

A. two pointers :

```
f(l, r)
if(l > r) return;
swap(a[l], a[r]);
f(l+1, r-1);
```

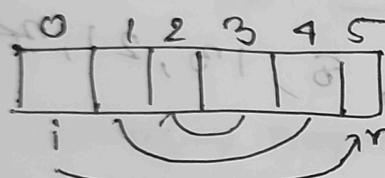

ptr swap  
middle no  
swap.

moment they cross/  
overlap → don't

```
main() {
    input(arr);
    f(0, n-1);
}
```

till now how?  $i \geq \frac{n}{2}$

```
f(i) {
    if(i > n/2) return;
    swap(a[i], a[n-i-1]);
    f(i+1);
}
```

```
main() {
    input(arr);
    f(arr, n);
```

Q. Check if string is Palindrome

functional  $\text{var} \xrightarrow{\text{rev}} \text{var}$

```

f(i) {
    if (i > n/2) return true;
    if (s[i] != s[n-i-1]) ret false;
    return f(1+i);
}
main() {
    string s;
    printf("%s", f(0,s));
}
  
```

TC  $\rightarrow \frac{N}{2}$   
SC  $\rightarrow \frac{N}{2}$  auxiliary stack space

## \* Multiple Recursion Calls

Fibonacci : 0, 1, 1, 2, 3, 5, 8, 13, 21, 34

$N^{th}$  n  $f(n) \rightarrow f(n-1) + f(n-2)$

```

f(n) {
    if (n <= 1) return n;
    last = f(n-1);
    secondLast = f(n-2);
    return last + secondLast;
}
  
```

```

main() {
    n ←
    f(n);
}
  
```

TC  $\rightarrow \frac{2}{n} \frac{2}{n-1} \frac{2}{n-2}$

$\hookrightarrow 2^n$  near about exponential nature.
